

Tonistry PxW WeanBetter

Tonistry PxW WeanBetter is a water-soluble solution for weaned or fattening pigs, to be used as part of the Tonistry Total Programme.

- ✓ **Improve water intake**
- ✓ **Improve feed intake**
- ✓ **Achieve heavier pigs**

Quick Reference

- **A follow-on solution, delivered through the normal water lines, especially for weaned pigs that were originally on Tonistry Px in the farrowing stage**
- **Specifically designed to improve water intake and intestinal function during the weaning transition**
- **An innovative and palatable combination of amino acids and electrolytes that delivers hydration and appetite stimulation during the weaning transition**

What is Tonistry PxW WeanBetter?

Tonistry PxW WeanBetter is a new, concentrated solution that is designed to be administered to weaning-age pigs through ordinary water lines.

What problem does it address?

Weaning can be a stressful time for pigs. If they don't start drinking early, it can lead to weight loss, reduced growth and even mortality. Increased water intake correlates to increased feed intake and Tonistry PxW WeanBetter encourages pigs to drink more during the weaning transition.

Tonistry PxW WeanBetter was carefully formulated to be a complementary product to Tonistry Px. Tonistry PxW WeanBetter works best when used with pigs that were previously exposed to Tonistry Px in farrowing, when they arrive in the nursery or grow/finish barn.

Product Benefits:

- ✓ A palatable formula that attracts pigs to their water post-weaning
- ✓ Administered through the normal drinking water system
- 🪣 The flavour profile evokes a memory response in pigs who were previously on the starter formula of Tonistry Px
- 🐷 All of these factors will contribute towards pigs drinking more eagerly with greater appetite, which in turn will have a positive impact on their overall health and performance
- 💧 Easy-to-use, water soluble formula

How to feed Tonistry PxW WeanBetter?

PxW

The product is easy-to-use and can be distributed in two separate ways:

1. Medicator Pump

- Add 1 kg of Tonistry PxW WeanBetter powder to 4 L of water in a suitable container. This will make a liquid concentrated solution
- Mix well until dissolved
- The concentrated solution of Tonistry PxW WeanBetter should be delivered through the water lines using an automatic dosing system, with the dilution rate set at 1 part of concentrated Tonistry PxW WeanBetter to 100 parts water (1:100). 10 L of concentrate supplies 850-1000 weaners for a day

2. Water Supply System (Header Tank)

- Add 1 kg of PxW WeanBetter powder to at least 5 L of water in any suitable container
- Mix well until dissolved
- Add that mixture to a 500 L water supply. 500 L of treated water will supply 400-500 weaners for a day
- For larger water supplies, work in multiples of 500 L

Tonistry PxW WeanBetter is packaged in 1 kg pouches.

What is in Tonistry PxW WeanBetter?

Ingredients: Sugars, amino acids, whey protein, electrolytes, prebiotics

The Fun Part:

When Tonistry PxW WeanBetter powder is diluted in water, a light pink colour appears, which confirms that Tonistry PxW WeanBetter is in the system.

Control

Pigs love the taste of it!
